Johannes W. Rohen MD, Elke Ltjen-Drecoll MD, Chichiro Yokochi PhD : Color Atlas of Anatomy: A Photographic Study of the Human Body before purchasing it in order to gage whether or not it would be worth my time, and all praised Color Atlas of Anatomy: A Photographic Study of the Human Body:

This Color Atlas of Anatomy features full-color photographs of actual cadaver dissections, with accompanying schematic drawings and diagnostic images. The photographs depict anatomic structures with a realism unmatched by illustrations in traditional atlases and show students specimens as they will appear in the dissection lab. Chapters are organized by region in order of standard dissection, with structures presented both in a systemic manner, from deep to

surface, and in a regional manner. This edition has additional clinical imaging, including MRIs, CTs, and endoscopic techniques. New graphics include clinically relevant nerve and vessel varieties and antagonistic muscle functions. Many older images have been replaced with new, high-resolution images. Black-and-white dissection photographs have been replaced with color photography. A companion website will include an Image Bank, interactive software (similar to an Interactive Atlas), and full text online.
