Gary L. Dockery DPM FACFAS, Mary E. Crawford DPM : Color Atlas of Foot and Ankle Dermatology before purchasing it in order to gauge whether or not it would be worth my time, and all praised Color Atlas of Foot and Ankle Dermatology:

This color atlas is a practical pictorial guide to the diagnosis of skin and nail conditions of the lower extremities. It features more than 1,000 detail-revealing full-color clinical photographs of over 100 common and uncommon lesions, grouped into easy-to-follow categories. The succinct text accompanying each photograph explains the lesion's salient features and, whenever possible, provides a differential diagnosis. Therapeutic recommendations offered include new

treatments for fungal nails and for scars. The opening chapter, on general principles, includes a classification with an algorithm and a problem-oriented algorithm. Subsequent chapters cover the entire gamut of disease entities--eczema; contact dermatitis; drug and toxic reactions; papulosquamous diseases; benign tumors; premalignant and malignant tumors; bacterial, viral, and fungal skin infections; infestations, parasites, and bites; developmental disorders; manifestations of internal disease; manifestations of circulatory disease; sweat and associated disorders; mechanical injuries; psychocutaneous disorders; nail disorders; and scar conditions.
