Kezhang Wang, Xinyu Wang : Color Vision Test Plates before purchasing it in order to gage whether or not it would be worth my time, and all praised Color Vision Test Plates:

1 of 2 people found the following review helpful. Chinese color vision test #2By Jerry DenimI bought this book in an attempt to prepare for an eye exam as part of an aviation medical in China. Based on the reports of others I have reason to believe some CAAC aeromedical offices do use this book, or use parts of this book along with others for the color vision testing portion of the medical. When I went for my medical this past June in Beijing I was not shown any of the plates contained in this book. Its ashamed. For me this book is much easier than the 1950's Chinese color vision test devised by Ziping Yu, Kai Cao and Yu Cao.Good luck to anyone whose career hinges on something as arbitrary and unscientific as these stupid parlor trick color confusion books.

Originally published in China in 1993, this text contains color plates for use in testing red, green, yellow, and blue (violet) color vision, and for classifying an individual's color weakness into three degrees, either strong, medium, or mild. Designed for use in the clinical setting, the 66 plates were developed based on the theory of color vision and the theory of complementary color, and include images for testing the general population as well as a selection of images for use with children and illiterates. The introductory text preceding the plates provides background information on color vision, types of color blindness, testing for the condition, and instructions on how to use the manual.
