Barry Bub : Communication Skills That Heal: A Practical Approach to a New Professionalism in Medicine
before purchasing it in order to gauge whether or not it would be worth my time, and all praised Communication Skills That Heal: A Practical Approach to a New Professionalism in Medicine:

9 of 10 people found the following review helpful. Beats Expectations By JAG, Nurse Educator I began this book thinking it would describe how practitioners can use communication to their help patients heal -- to, as much as is possible, restore patients (or help start them on the path) to health and wellbeing. And it does. What it also does,

however, is address the important issue of health practitioners' health and wellbeing. This is important, the author says, because practitioners who are not at peace with themselves cannot help their patients to become so. What makes his take on all this credible is that, as a physician, he well understands and values the training of doctors. He speaks the language. As such, he is able to present his case in a way that is not only convincing, but helpful. Health practioners who read this book will find valuable insights and practical tips for moving both themselves and their patients along the path to wellness.

This working manual has been developed to ensure that all health professionals involved in immunization will be both knowledgeable about procedures and confident about their benefits. This new edition is fully updated and revised to take account of the latest changes in the field including recent public controversies. It shows the practitioner how to give vaccines safely and how to inform parents. In line with Immunization against Infectious Disease produced by the Department of Health the book is written in a practical and easily accessible form. It is essential reading for those 'in the field' who are directly responsible for giving immunizations - general practitioners health visitors school health nurses practice nurses clinical medical officers and district nurses. It is of use in training primary care staff medical students and to trainee paediatricians. Parents also will find Immunizing Children interesting and useful particularly the section on frequently asked questions.

"It will become required reading for our medical students and residents." -- FACS Healthcare Communication About the Author Barry Bub, MD, is a physician educator, mentor, and psychotherapist, and President of Advanced Physician Awareness Training, Philadelphia, Pennsylvania, USA
