False Advertisement, DO NOT PURCHASE By CSLike one other person who purchased this textbook stated, the CD has to be purchased separately and there is no Connect Plus Access Code Card with it. And I purchased a new textbook. I contacted McGraw-Hill and they told me that I needed to contact the seller or go to the bookstore. This whole textbook purchase was a complete mess and false advertisement. I can't even do all of the exercises in it because I have to search for the Access Card. And is not much help.6 of 6 people found the following review helpful. CD ROM By Donna ParsonsI wish it included a method of download besides the CD, for the students that don't have CD ROM on their computers5 of 5 people found the

following review helpful. Does not come with the CD. By Cheyanne I chose this to be a three star because it didn't come with the CD. I also had it as a used book. Which the condition was supposed to be new. I had to wait for awhile. And contacted the seller. They did their best, but I had to return the book, because within my purchase I thought I would have the book and CD.

Computers in the Medical Office 8e is the best-selling text for training students using full-featured and current Medisoft Version 17 Patient Billing software. McGraw-Hill publishes the most titles to train students on Medisoft software. Our publishing relationship with Medisoft has been ongoing for 15 years. Computers in the Medical Office 8e offers medical office training using current, realistic medical office cases while building transferable computerized medical billing and scheduling skills. Students who complete this course will learn the appropriate terminology and skills to use any patient billing software program with minimal additional training. As students progress through Medisoft, they learn to gather patient information, schedule appointments and enter transactions. The practical, systematic approach is based on real-world medical office activities. Go with the best. Go with the tried and true. Go with the Medisoft titles that will give you and your students the training and support you need to be successful. Go with McGraw-Hill's Computers in the Medical Office 8e CiMO, 8e features some organizational changes from the previous editions: Chapters 1 and 2 from CiMO, 7e have been combined into Chapter 1; the Chapter on Scheduling has been moved up to Chapter 3; and the exercises in the last four chapters have been reorganized and streamlined to match the exercise progression earlier in the book. CiMO, 8e reflects a major change that is coming in the healthcare field-the change from ICD-9-CM diagnosis codes to ICD-10-CM codes. Hands-on Medisoft exercises, using Medisoft V17, in each chapter offer guided instruction, and they proceed from simple to complex. At the end of each chapter, "Applying Your Skills" exercises provide students with the opportunity to practice applying what they learned in the chapter without guided instruction.
