From Jossey-Bass : Methods for Community-Based Participatory Research for Health before purchasing it in order to gage whether or not it would be worth my time, and all praised Methods for Community-Based Participatory Research for Health:

0 of 0 people found the following review helpful. Got tools?By Kau'i BaumhoferCBPR is all about putting the power back in the people's hands and this book certainly furthers that tradition. As well as I can remember most, if not all, of the readings included in this book were written by teams of academics and community partners.Have you ever read a study and nearly died because you wanted to see a copy of the survey used, but couldn't find it anywhere on the internet? Look no further. The appendices of this book are filled with survey, community checklists, field note guide, and examples of process and intervention evaluation questions.Full disclosure: I had the honor of reading this book while studying under Drs. Israel and Schulz so I'm a little biased...0 of 0 people found the following review helpful.

Good text, great case studies
By swizzler
Got this for a class before even really understanding the difference between community-based research and community-based participatory research. This lays out the significance, theoretical backing, and actual practices of this research. The authors are highly regarded in the CBPR world, and offer a valuable perspective for making real, sustained gains in health. Very good for any activists interested in how to translate their work to research or just to work with researchers.

By Deanna
Very easy to follow descriptions of relative and recent community based participatory research evaluations. Really helped my understanding.

This thoroughly revised and updated second edition of *Methods for Community-Based Participatory Research for Health* provides a step-by-step approach to the application of participatory approaches to quantitative and qualitative data collection and data analysis. With contributions from a distinguished panel of experts, this important volume shows how researchers, practitioners, and community partners can work together to establish and maintain equitable partnerships using a Community-Based Participatory Research (CBPR) approach to increase knowledge and improve the health and well-being of the communities involved. Written for students, practitioners, researchers, and community members, the book provides a comprehensive presentation of innovative partnership structures and processes, and covers the broad spectrum of methods needed to conduct CBPR in the widest range of research areas including social determinants of health, health inequities, health promotion, community interventions, disease management, health services, and environmental health. The contributors examine effective methods used within the context of a CBPR approach including survey questionnaire, in-depth interview, focus group interview, ethnography, exposure assessment, and geographic information system mapping. In addition, each chapter describes a case study of the application of the method using a CBPR approach. The book also contains examples of concrete tools and measurement instruments that may be adapted by others involved in CBPR efforts.

About the Author
