Jason Louv : Monsanto vs. the World: The Monsanto Protection Act, GMOs and Our Genetically Modified Future before purchasing it in order to gage whether or not it would be worth my time, and all praised Monsanto vs. the World: The Monsanto Protection Act, GMOs and Our Genetically Modified Future:

40 of 40 people found the following review helpful. Short, succinct, and informative
By Brady Kelso
Mr. Louv gives his readers the lowdown on corporate monsters like Monsanto and the big business of genetically-modified seeds. As always, his writing is clear, focused, and balanced. He is the Upton Sinclair of 2013, and I look forward to more of his reportage into these hard-hitting areas of social concern.

By LibertarianReview
A book you can read in one sitting--not a bad thing--with a quick introduction to GMO foods and the part MONSANTO plays in the nations bread basket. Monsanto's abusive tactics will unnerve you. Remember DDT? A Monsanto product finally after a public health cry-- taken off the market.
The book's first chapter gives you an understanding of its money makers including ROUNDUP herbicide and ROUNDUP READY SEEDS. These products should unnerve you as well including Bt SEEDS, which sprout crops that are genetically engineered to produce their own insecticide. These are GMO foods that go into your mouth and down to your stomach.
Can you imagine! An important chapter is This should surprise you; the everyday foods that are GMO grown. The best health rule for everyone is to buy foods labeled-- 100% Organic-- in Europe buy--NON GMO. I did not give this book five stars because I would have liked to see information on people who had their health compromised because of GMO foods. This book is well worth the money. I bought the paper back, however you can read it on Kindle. Other books on cover the health issues of GMO foods as well.

By Al Swanson
My feelings about multi national corporations are well known and they aren't positive. But are they evil or just self serving? Most would seem to be the latter. The outside view might seem evil but really., they don't care and are doing all they can to make a profit. While not applaudable, at least understandable. Monsanto, on the other hand is the very definition of evil. They not only do all they can to make a profit - but care not one whit who they hurt in the process. Further, they take direct aim at their competitors in a manner that specifically hurts folks exposed.
Through the revolving door that leads from corporate leadership to government lawmaker - where they can specifically engineer rules that benefit the same corporation they left (or plan to go to) - and back to corporate life, these rich thugs impose their will on everyone. Creating crops that absorb their weed killers as a means to become immune to them, those crops then pass that stored poison on to the folks that consume them.
Look at photos of Americans 30 or 40 years ago. We weren't fat. How many kids had autism? How many of us died from cancers? All of these things have increased dramatically since the introduction of GMO's.
Most of us will do nothing. The government and their cronies in the corporate boardrooms plan on that. Some will write books. And hopefully some will resist money and make laws. There is a reason most of the world rejects GMO'S and Monsanto's hold. Maybe you should read this book.

Monsanto one of the largest agriculture and biotech companies in the world creates genetically engineered seeds and food, or GMOs. They've also brought us toxic chemicals like DDT, PCBs and even Agent Orange. But what is Monsanto truly doing to our diet and why do many consider their business practices deeply abusive? Are GMOs the solution to world hunger, or a shockingly dangerous threat to our health? And does Monsanto really, as some suggest, control much of the United States' agriculture and food departments? Meticulously researched, *Monsanto vs. the World* puts to rest the myths and shows the shocking reality, delving into the science of GMOs, the political machinations of Monsanto in Washington and around the world, and showing what you can do to keep GMOs off your plate for good.
