Seller shipped fast which I was very grateful for. Book was in very good condition, just the expected highlights which is not a problem. Plus, the seller was part of a 'helping the disabled student' program - so I was also helping another student with this purchase! Very good experience and I was especially happy that this book became available just when I needed it! Thank you!0 of 0 people found the following review helpful. Very good read. Gives you some good information that may come in handy, in real life, every day situations.0 of 0 people found the following review helpful. dissatisfiedBy C.W.This might be a good text book for an EMT course but is not a good tool for learning

first aid. I bought this due to a recommendation in a prepper magazine. It was not what I was looking for.

This textbook is the key to the essential knowledge and skills needed to provide life-saving emergency care to the sick and injured. In 1995 the United States Department of Transportation National Highway Traffic Safety Administration released the First Responder: National Standard Curriculum. This student text is the first for First Responders that embraces sound educational principles and follows the format developed for all DOT National Standard Curricula and it aims to teach First Responders to assess and care for ill and injured patients with minimal equipment. Appendices have been included at the end of some chapters to teach students who have access to some emergency equipment how to properly use this equipment for patient care.\* First Response scenarios to help put material in real-life context \* Review boxes for self-assessment \* Technique boxes for step-by-step skills instruction \* Practical skills appendices covering oxygen administration, ventilation, AEDs, immobilization, and more!
