Norbert Becker, Dusan Petric, Marija Zgomba, Clive Boase, Mino Madon, Christine Dahl, Achim Kaiser : Mosquitoes and Their Control before purchasing it in order to gage whether or not it would be worth my time, and all praised Mosquitoes and Their Control:

Mosquitoes and Their Control presents a wealth of information on the bionomics, systematics, ecology, research techniques and control of both nuisance and disease vector mosquitoes in an easily readable style, providing practical guidelines and important information for professionals and laymen alike. Ninety-two European species and more than 100 globally important vector and nuisance species are included in the book. Most of them, including all European species, are described in the fully illustrated identification keys, followed by a detailed description of the morphology,

biology, distribution and medical importance of each species, including over 700 detailed drawings. *Mosquitoes and Their Control* includes: systematics and biology, medical significance, research techniques, illustrated identification keys for larval and adult mosquito general, morphology, ecology, and distribution of the species identified in the keys, biological, chemical, physical and genetic control of mosquitoes. *Mosquitoes and Their Control* is a valuable tool for vector ecologists, entomologists, and all those involved with mosquito control, biology, ecology, and systematics world-wide. It will especially benefit those professionals, scientists and students dealing with mosquitoes and their control on a day-to-day basis. Society as a whole stands to gain from improved, environmentally responsible mosquito management programs designed on the basis of a broader understanding of mosquitoes and their control, as provided in this enlightening book.
