**John P. Glaser, Claudia Salzberg : The Strategic Application of Information Technology in Health Care Organizations** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Strategic Application of Information Technology in Health Care Organizations:

This new edition of The Strategic Application of Information Technology in Health Care Organizations offers a peerless guide for health care leaders to understand information technology (IT) strategic planning and implementation. Filled with illustrative case studies, the book explores the link between overall strategy and information technology strategy. It discusses organizational capabilities, such as change management, that have an

impact on an organization's overall IT effectiveness, and a wide range of IT strategy issues. The book covers emerging trends such as personalized medicine; service-oriented architecture; the ramification of changes in care delivery models, and the IT strategies necessary to support public health. "Health information technology sometimes masquerades as an end in itself. The reality is that IT is a means to an end, an enabler of the strategic goals of health care organizations. This volume reminds us that shaping IT strategy and implementation to an organization's goals is the key to generating both economic returns and safer care for patients. You don't need an engineer to understand how to use IT to advance a health care organization's strategic agenda. You just need to read this book." Jeff Goldsmith, PhD, president of Health Futures, Inc. "In this time of health care reform, nothing is more front and center than health IT. This book is an exceptional blueprint for the future, with a focus on the essential measures of success for any system implementation." Stephanie Reel, MBA, vice provost for information technology and chief information officer, The Johns Hopkins University "In this book, the authors answer the question that every health care leader should be asking: How do we unlock the promise of health information technology and fundamentally reshape our industry? This is a must-read for every person who wants to improve American health care." David Brailer, MD, PhD, chairman of Health Evolution Partners

About the Author John Glaser, PhD, is chief executive officer of the Health Systems Business Unit at Siemens and is a board member of the National eHealth Collaborative and the eHealth Initiative (eHI). Dr. Glaser was previously vice president and chief information officer at Partners HealthCare System, Inc. and also served as vice president of information systems at Brigham and Womens Hospital. Dr. Glaser was the founding chairman of the College of Healthcare Information Management Executives (CHIME) and is past president of the Healthcare Information and Management Systems Society (HIMSS). Claudia Salzberg, MS, is a researcher and analyst in the Center for Patient Safety Research and Practice and the Division of General Medicine of Brigham and Womens Hospital. Currently she participates in research focused on analyzing the impact of health information technology on healthcare overall, and in particular patient safety, and in addition the impact of health policy approaches on these domains.
