Removal of Mercury--a Known Neurotoxin--from Vaccines:

0 of 0 people found the following review helpful. Its your healthBy Ian MooreIf only more people took an interest in their health. A book that needs to be read by more.1 of 1 people found the following review helpful. Five StarsBy SylviaA must-read landmark book provided vital information based on real science.0 of 0 people found the following review helpful. Why does the CDC lie?By Elizabeth MickleyThe truth is scary. We knew the children were being damaged, now we the truth.

From New York Times bestselling author Robert F. Kennedy, Jr., comes a science-based call for the immediate removal of the dangerous mercury-containing preservative Thimerosal from vaccines. Over a decade ago, following a sharp rise in developmental disorders such as autism and ADHD, the mercury-containing preservative Thimerosal was widely believed to have been eliminated from vaccine supplies in the United States and abroad. However, dangerous quantities of Thimerosal continue to be used, posing a significant threat to public health and leading to a crisis of faith in vaccine safety. In this groundbreaking book, Robert F. Kennedy, Jr., examines the research literature on Thimerosal and makes a very clear statement about its potentially dangerous effects. In the past, the CDC, FDA, NIH, and AAP, as well as the US Congress, the American Academy of Family Physicians, the US Department of Agriculture, the European Medicines Agency, and the California Environmental Protection Agency have expressed concerns over the use of Thimerosal in vaccines. But despite the many voices calling for action, the media and policy makers have repeatedly failed to adequately address the issue. Now, with *Thimerosal: Let the Science Speak*, the science supporting the elimination of this toxic chemical from the worlds vaccine supplies, and its replacement with already available safer alternatives, is all in one place. Making this change should increase vaccination rates by restoring the trust of concerned parents in the vaccine programa program that is so vitally important to public health.

Would you expose the unborn child or infant of a loved one to a vaccine containing mercury, a known neurotoxin, if you knew there were other safer alternatives? Does it make any sense that even though Thimerosal is banned as a topical antiseptic and is considered hazardous waste that cant legally be thrown in the garbage, it is somehow safe to inject into pregnant womenand babies? MARK HYMAN, MD, founder and medical director, UltraWellness Center; chairman of the board, Institute for Functional MedicineThe evidence of Thimerosals neurotoxicity is so overwhelming that anyone who is willing to read the science must conclude that Thimerosal can cause brain damage. ROBERT F. KENNEDY, JR., JD, LL.M., clinical professor of environmental law; codirector, Pace University School of Law Environmental Litigation ClinicWhen vaccines contain the potent toxin mercury, they can harm public health while they protect it. This is a serious paradox and an error. I hope and implore that this books overwhelming scientific evidence moves us all to do whatever it takes to correct this error, because it is unnecessary, and it can and must be corrected. MARTHA R. HERBERT, PhD, MD, assistant professor of neurology, Harvard Medical School; pediatric neuroscientist, Massachusetts General HospitalMany of the CDCs own studies have demonstrated a link between increased Thimerosal exposures and the development of vocal and motor tics, which are generally recognized as autism-like features. This alarming association has been downplayed to the public. Sadly, public health agencies insistence on Thimerosals safety has effectively inhibited objective investigations into research misconduct and conflicts of interest within health agencies and the vaccine industry. CONGRESSMAN BILL POSEY, four-term congressman in FloridaIts no easy task to counter the well-funded astroturf campaigns and endless misinformation passed along by propagandists (and even the well-intentioned-but-misinformed). But Bobby Kennedy continues to do just thatconfronting corruption, censorship, and a federal government co-opted by the pharmaceutical industry. SHARYL ATTKISSON, investigative journalist; author, *Stonewalled*Kennedy shows in great detail how the pharmaceutical industry has completely brainwashed the mainstream media and medical community As the parent of an autistic child who obviously developed brain damage as a reaction to a vaccine, I ask you to throw away your preconceptions and read the facts. AIDAN QUINN, actor
