Everyone should read it especially those with family members on psychiatric medications.0 of 0 people found the following review helpful. A close look at the how Big Pharm gets psychiatric drugs to market, influences the Psychiatric community, and more.By Adam ChorneskyA revealing look at the Psychiatric Pharmicological Complex, how each supports the other. Still, if you have a relative who is in need of treatment, the alternative to not using medications is not a very pretty one. Your relative can be on medications, be able to function as a normal part of the community, drive a car, keep a job, rent or own your own home. Or your relative can refuse to take medication, live in the street, get mugged, assaulted, or worse because they cannot effectively operate in the real world. Avoid the use of Haldol. It is the worst! Latuda seems to be the best.0 of 0 people found the following review helpful. Good damn bookBy ALIEN HCGood damn book, there is everything you need to know here, the author speak about everything that i have passed in my own 10 experience of psychiatric medications(depression, mania, Hyperactivity, traumas, stress, alcohol related to medications, even psychology it's present on this book), i personally like that part(like you can already see on the cover) about suppress the passion on women.A must, on the issue of psychiatry.By The Way, i still couldnt find any good new informations about Haldol even here...especially that threatment through injection...

Prozac, Xanax, Halcion, Haldol, Lithium. These psychiatric drugs--and dozens of other short-term "solutions"--are being prescribed by doctors across the country as a quick antidote to depression, panic disorder, obsessive-compulsive disorder, and other psychiatric problems. But at what cost?In this searing, myth-shattering expos, psychiatrist Peter R. Breggin, M.D., breaks through the hype and false promises surrounding the "New Psychiatry" and shows how dangerous, even potentially brain-damaging, many of its drugs and treatments are. He asserts that: psychiatric drugs are spreading an epidemic of long-term brain damage; mental "illnesses" like schizophrenia, depression, and anxiety disorder have never been proven to be genetic or even physical in origin, but are under the jurisdiction of medical doctors; millions of schoolchildren, housewives, elderly people, and others are labeled with medical diagnoses and treated with authoritarian interventions, rather than being patiently listened to, understood, and helped.Toxic Psychiatry sounds a passionate, much-needed wake-up call for everyone who plays a part, active or passive, in America's ever-increasing dependence on harmful psychiatric drugs.
