Andrew Biel : Trail Guide to the Body AudioGuide before purchasing it in order to gage whether or not it would be worth my time, and all praised Trail Guide to the Body AudioGuide:

7 of 7 people found the following review helpful. which I really like as the book will lie flat and the pages ...By S. WarnerI bought this Trail Guide workbook to go along with the text book. So far, I am loving both! The workbook (as is the textbook) is in spiral format, which I really like as the book will lie flat and the pages stay where they are placed. It follows along with the text as far as the contents go. There are lots of illustrations, fill in the blank, label the parts, and 'describe the action' type activities. The answers are provided in the back of the book. My plan is to really learn the material though, so I won't look at the answers until the exercise is complete! The price tag of \$24.95 seems at first glance, a little steep for a workbook, but it really isn't. There is a ton of helpful information that coordinates with the text, in this workbook. I highly recommend both books.5 of 5 people found the following review helpful. Great tool for studying!!By TrishaJBMMy functional anatomy class used the corresponding text book that this work book goes

along with. I am very pleased with this purchase and have found it very helpful for studying! I would definitely recommend this workbook! 1 of 1 people found the following review helpful. Easy learning By Julie This book is great for learning anatomy, especially if you get the flash cards with it! They both show each muscle as part of the whole system and each one individually and discuss the insertion, origin, and action. Also discuss all the sections of each bone, very user friendly and easy to follow

Enhance your learning of musculoskeletal anatomy while maximizing your time. Join author Andrew Biel as he narrates Trail Guide to the Body. This three-hour series (on 4 CDs) explores 100 major muscles. A great tool for auditory learners or learning on-the-go. Each track includes: 1) Introduction to the muscle 2) The muscle's actions, origin, insertion and nerve innervation 3) Step-by-step instructions for palpating the muscle and, 4) "Check-it" information to ensure your location.
