Larry D. Purnell PhD RN FAAN : Transcultural Health Care: A Culturally Competent Approach before purchasing it in order to gauge whether or not it would be worth my time, and all praised Transcultural Health Care: A Culturally Competent Approach:

10 of 10 people found the following review helpful. Can we leave in disease? By EJR Good subject matter, horrific writing. Typos like you would not believe! "...the topography and physical environment of one's residence may increase one's chances of being inflicted with an can we leave in disease?" I would like to spend my money on a book that has actually finished going through the editing process. Thx. 4 of 4 people found the following review helpful. A very accessible text with good information for use in a clinical setting or for ... By Amy E. A very accessible text with good information for use in a clinical setting or for students preparing for clinical practice. I use this text to facilitate discussion and learning with pre-professional health students and appreciate its practical approach to learning the

aspects of culture most salient to providing good and culturally sensitive health care. On a picky and academic note however, it is poorly edited. The text is rife with typos and also lacking in some text references; cultural theories from the social sciences are introduced and provide the backbone for some of the "domains," yet the theorists by whom they were developed are not identified. 1 of 1 people found the following review helpful. Index is inaccurate By Donna The information is great and informative but the index in the back of the book is completely wrong. Therefore, it is unnecessarily difficult finding information throughout the book. If memory serves me correctly, I had this same problem with an earlier version of this book when I was in school for my BSN.

Prepare yourself for the culturally rich and ethnically diverse world in which you will practice. Noted researchers, educators, and clinicians from a wealth of backgrounds use the Purnell twelve-step model to examine 33 population groups from a health care perspective. Each brings a personal understanding of the traditions and customs of their societies, providing a unique perspective on the implications for patient care.
