From CABI : Tuberculosis, Leprosy and Other Mycobacterial Diseases of Man and Animals: The Many Hosts of Mycobacteria before purchasing it in order to gage whether or not it would be worth my time, and all praised Tuberculosis, Leprosy and Other Mycobacterial Diseases of Man and Animals: The Many Hosts of Mycobacteria:

Mycobacteria are bacterial pathogens which cause diseases in humans and non-human animals. This monograph will primarily cover the most important and widely researched groups of mycobacteria: members of the *Mycobacterium tuberculosis* complex (MTC) and *Mycobacterium leprae*, across a wide range of host species. *M. tuberculosis* and *M. bovis* are particularly relevant with the increasing drug resistance and co-infection with HIV and the possible cross-infection of badgers and cattle associated with *M. bovis*. This ideal reference for researchers working in different fields draws together information on different pathogens, and by considering the diseases in a zoonotic context provides a One Health approach to these important groups of diseases.
