It was exactly as described and even had the disks.11 of 11 people found the following review helpful. Comprehensive Instruction Material for Beginner Coders and BillersBy Dr. Yuval LirovMedical coding and billing continuously evolve in large part because insurance companies and providers have conflicting business goals. An effective biller must go beyond simple claim submission and discover the reasons for underpayments and denials, to solicit missing information from both providers and payers, and follow up on every claim until its full payment.Rowell's and Green's Guide provides an ideal introductory didactic set of materials covering everything from history of health care

reimbursement, major insurance companies, and federal health care legislation, to basic knowledge of national diagnosis and procedure coding rules, to complex topics, such as V-codes, and diagnosis code linking. The text is replete with examples and exercises, helping students understand and remember the needed materials. Unhappy student camper By Ellen S. At first, I was delighted. Yes, this textbook had writing throughout the margins. Yes, a lot of the review questions were already answered right in the book, but I figured that it was cheap so what could I expect. But I think that if a bookstore buys back used textbooks, maybe having all the review questions answered inside the book isn't a book you should try to sell. The worst part, though, was discovering that whole chapters were actually missing from the book. I've calculated that close to 100 pages have actually been physically removed from the book, some back to the binding making them hard to see until you are reading/studying along and the next page you turn to makes absolutely no sense. Then you find out that a bunch of pages are missing and that you are now reading from the middle of the next chapter. I would not recommend this seller since the book looks OK from the outside, but has cost me more time than the price savings bought me.

Understanding Health Insurance: A Guide to Billing and Reimbursement, 8th Edition is a comprehensive source for teaching the subject of health insurance and reimbursement. The book contains chapters on introductory information on the health insurance field, managed health care, legal and regulatory issues, coding systems, reimbursement methodologies, coding for medical necessity, and common health insurance plans. Each chapter contains exercises to illustrate content and reinforce learning. Numerous opportunities are provided throughout the book for manual completion of CMS-1500 claims. A CD-ROM at the back of the book allows for electronic data entry of CMS-1500 claim form information. End of chapter review questions in objective format (e.g., multiple choice) test learners on their understanding of book content. Appendices I and II provide case studies that are also included on the Student Practice CD-ROM. Additional appendices provide instruction in dental claims processing and completion of the UB-92 (claim used for inpatient and outpatient hospital claims). The accompanying workbook provides application based assignments for each chapter, additional content review (multiple choice questions), and additional case studies for practice in completing CMS-1500 claims. This edition of the book contains the most up to date information regarding health insurance claims processing and coding and reimbursement issues.
