Barbara Zoltan MA OTR/L : Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury before purchasing it in order to gauge whether or not it would be worth my time, and all praised Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury:

0 of 0 people found the following review helpful. This is the 4th edition. If you have an ...By Carmces This is the 4th edition. If you have an older edition, then it is time to update. The information is priceless with diagnostic information,

to evaluations, and treatment. I took this to my occupational therapy fieldwork in a stroke rehab hospital and all the therapists borrowed it and they even discussed purchasing a copy for the department. 5 of 5 people found the following review helpful. Useful Reference By DSTOTAs an entry level OT, I often use this book to help me better understand the nature of the deficits experienced by my patients with cognitive, visual, or perceptual problems. Although I haven't made it through the entire book, I've found it to be well outlined and detailed. I definitely feel more confident in my treatment approach and explaining the deficits to patients and their families. The topic matter is definitely advanced level material, but overall highly recommended if you have an interest in vision, cognition, and perception. 0 of 0 people found the following review helpful. Great resource! By Customer I won't lie, this can be a bit painful to read through... but it contains so much valuable information about disorders, symptoms, evaluations, treatment styles, and intervention ideas. A very helpful resource!

Vision Perception and Cognition, Fourth Edition is a concisely structured text that expertly addresses clinical reasoning and decision making for the entire evaluation and treatment process of the adult with acquired brain injury. Provided are theoretical information, guidelines for both static and dynamic assessment, information on specific standardized evaluations, guidelines for adaptive and restorative treatment based on described theoretical and evidence-based information, and information on environmental impact of client performance. Inside this best-selling book, Barbara Zoltan, MA, OTR/L addresses visual, perceptual, and cognitive evaluation and treatment, providing structure, clarity, and content suitable for both students and experienced clinicians. Updated and expanded to reflect current practice and relevant research, Vision, Perception, and Cognition, Fourth Edition is a unique resource that takes the reader from theory to practice in a practical and detailed way. Students and clinicians will benefit from the numerous tables, figures, and extensive references presented throughout the text, as well as the inclusion of a glossary, for easy reference to terminology used throughout Vision, Perception, and Cognition, Fourth Edition. Faculty will be impressed by the addition of an on-line instructors manual for additional classroom learning objectives and activities. Component areas covered include: Primary visual skills Apraxia and agnosia Visual discrimination skills Orientation Attention Memory Self-awareness and monitoring Planning and organization Problem solving and decision making Categorization Mental flexibility Abstraction Generalization and transfer Acalculia New topics addressed in this Fourth Edition: Constraint-induced therapy Brain plasticity/Functional reorganization Neuroimaging Specific occupation-based models and evaluations Contextual influence on client performance Client-centered practice Client learning capacity Clinical reasoning Interviewing Standardization Visual vestibular processing Pupillary response Contrast sensitivity Whether you are a student or clinician in the area of occupational therapy, physical therapy, neuropsychology, optometry, or speech pathology, Vision, Perception, and Cognition: A Manual for the Evaluation and Treatment of the Adult with Acquired Brain Injury, Fourth Edition will continue to be an invaluable resource for exploring theory and practice in the evaluation and treatment processes.

This is a very well researched and referenced text that effectively integrates the authors many years of experience with research evidence. It provides the student and practicing clinician with many helpful resources, including specific standardized assessments, occupationally based assessments and dynamic assessments as well as additional references to consult for further reading. As each chapter addresses a particular set of deficits and skills, clinicians can also quickly refer to specific chapters of interest as questions arise in their practices. Mary Kita, Canadian Journal of Occupational Therapy
