**Dr. Marc B. Taub OD, Dr. Mary Bartuccio OD, Dr. Dominick Maino OD : Visual Diagnosis and Care of the Patient with Special Needs** before purchasing it in order to gage whether or not it would be worth my time, and all praised Visual Diagnosis and Care of the Patient with Special Needs:

1 of 1 people found the following review helpful. FCOVDers rock special pops!By Bob KocemboMarc, Mary and Dom were able to take a very difficult and sensitive subject and postdoctoral Fellowship process and make it respectfully accessible.1 of 1 people found the following review helpful. We finally have a summary of visual intervention for this important populationBy Brandon McdermedIf you work with special needs patients or want to

start providing this much needed visual service, this is the book for you! Highly recommended.

Visual Diagnosis and Care of the Patient with Special Needs provides a thorough review of the eye and vision care needs of patients with special needs. This book gives you a better understanding of the most frequently encountered developmental and acquired disabilities seen in the eye care practitioners office. These disabilities include patients with autism, brain injury, Fragile X syndrome and Down syndrome, as well as those with psychiatric illness, dual diagnosis, and more. The text discusses, in great detail, the visual issues inherent in these populations and their possible treatment. A group of authors with approximately 500 years of experience in the field of eye care and special populations have been brought together to develop this comprehensive reference. It may appear that this book is written primarily for eye care practitioners such as optometrists and ophthalmologists, while vision is the overriding topic, this book serves as an excellent resource for a multitude of professions including those engaged in occupational therapy, physical therapy, speech and language therapy, psychiatry, social work, pediatric medicine, and special education. There is literally no other book that covers this very important subject area. It is structured by common conditions that lead to special needs so that the reader can easily access areas they need more information in. The writing style and tone of the book are very clear and simple. This text could also be easily read by lay person carers of special needs patients. This area of work within eye health in the world is very much neglected. It is a groundbreaking piece of work to help the most disabled of people in our modern society. In addition they have done a great job of a most complex task. BMA Medical Book Award reviewer, 2013 BMA Medical Book Awards
