Glenn Doman : What To Do About Your Brain-injured Child before purchasing it in order to gage whether or not it would be worth my time, and all praised What To Do About Your Brain-injured Child:

0 of 0 people found the following review helpful. Amazing book from an amazing man. By Crystal Carew I took his courses at the IAHP and they were amazing. I read this for additional reference. It is a great book and I love the science behind it I just wish I could have built a program on it for my kids who are struggling with learning. I am going to still incorporate this book into it. I highly suggest taking the week course. It was amazing insight. I took the

one for the baby and I wish they taught it to every parent in the hospital before you are discharged. The whole institute speaks so much truth and what the main stream doctors are telling you to do with the baby now is exactly opposite of what we should be doing. I wish I had known all this with my first kid. I did exact opposite with my other two and you can tell a huge difference. 0 of 0 people found the following review helpful. Hard to appreciate this book. By Melissa NY This book was more about how the institution was developed and how the author came up with their methods than how to really help your child. It was such a frustrating read. There is something about the tone of the book that makes you feel like you don't know anything and "they" do which makes it difficult to appreciate the book. 3 of 3 people found the following review helpful. Probably a good book, difficult to read. By Leanne I was recommended this author by my chiropractor. I had asked him about therapy for my son due to retained primitive reflexes. He said that he recommended a book "Teach your baby to be superb" by this author. When I ordered that title, I also ordered this one. It is a dry read. Very dry. I had to really struggle to pay attention to what he wrote. 9/10 of what I did manage to read was more about HIM and HIS career than it was about what *I* needed to do with *my* child. I ended up shelving both these books and downloading 10 Gems for the Brain which has all the exercises laid out and illustrated. It even tells you in what order to do them. I will use that book, rather than these two.

Glenn Doman pioneer in the treatment of the brain-injured children and founder of The Institutes for the Achievement of Human Potential brings hope to thousands of children who have been sentenced to a life of institutional confinement. In *What To Do About Your Brain-Injured Child*, Doman recounts the story of The Institutes' tireless effort to refine treatment of the brain injured. He shares the staff's life-saving techniques and the tools used to measure and ultimately improve visual, auditory, tactile, mobile, and manual development. Doman explains the unique methods of treatment, and then describes the program with which parents can work with their own children at home in a familiar and loving environment. Included throughout are case histories, drawings, and helpful charts and diagrams.

About the Author Glenn Doman received his degree in physical therapy from the University of Pennsylvania in 1940. From that point on, he began pioneering the field of child brain development. In 1955, he founded The Institutes' world-renowned work with brain-injured children had led to vital discoveries regarding the growth and development of well children. The author has lived with, studied, and worked with children in more than one hundred nations, ranging from the most civilized to the most primitive. Doman is also the international best-selling author of six books, all part of the Gentle Revolution Series, including *How To Teach Your Baby To Read*, *How To Teach Your Baby Math*, and *How To Give Your Baby Encyclopedic Knowledge*.
