**FACHE, Mark G. Tozzio, MA-IHHS : Why The United States Healthcare System Should Be A Limited Human Right For All** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Why The United States Healthcare System Should Be A Limited Human Right For All:

2 of 2 people found the following review helpful. Healthcare is a moral issue By Joe the Consultant this is a timely and well written book about the need for adopting a moral position on healthcare in the United States - today. We have heard all the chatter about the cost of healthcare reform...the truth is that unless we move quickly to reform healthcare system in the US now, the country will be bankrupt in 15 years with a healthcare tab over \$8 trillion. Health people make for a healthy nation. This book shows why healthcare should be a limited human right for all in a logical discussion with lots of graphs and charts. It is excellent. I bought one for myself and another two to give away to friends.

The present healthcare crisis in the United States is the result of our immensely successful progress toward conquering debilitating diseases and extending life expectancy. More people are alive today than the combined number of individuals who have reached the milestone of 80, 90, and 100 years old. Americans are outliving the normal limits of Social Security and Medicare resources. Now is the time in U.S. history to take a decisive stand on crucial healthcare issues regarding the moral and ethical considerations for providing rational and affordable health services within a framework of fairness and distributive justice. This is an update to the original 2009 volume with Sections One and Two (new).

About the Author Mark G. Tozzio, M-IHHS, FACHE is Principal / Senior Health Consultant for Hospital and Physician Practice Development Consulting, Inc. (HPPD, Inc.) in Broken Arrow, Oklahoma. He has 36 years of diversified experience in hospital management and business development. His consulting practice focuses on organizational turnaround, process improvement, corporate strategy and planning, facilities development, and physician recruitment and relations. Mark has worked throughout the U.S., assisting organizations to recruit over 800 physicians into rural and urban communities. He has also implemented new programs and services totaling over \$850 million at hospitals ranging from 25 to 500 beds. Mark is currently Adjunct Instructor for Healthcare Administration, for Northeastern State University - Oklahoma. Mark is a Fellow of the American College of Healthcare Executives (FACHE), Chicago, Illinois. He received his undergraduate degree, Cum Laude, from the University of Washington, Seattle -- double major in Human Ecology and Planning. He holds a Masters degree in Interprofessional Health and Human Services (M-IHHS) from the University of Oklahoma, Norman. Mark is a member of The National Scholars Honor Society and Golden Key International Honour Society. Mark's thesis is the basis of his book. His Committee at the University of Oklahoma included distinguished Professors John L. Duncan, specializing in Leadership and Medical Ethics; Vicki L. Tall Chief, specializing in Public Health Services and Rural Health Improvement; and Willie V. Bryan, specializing in Health Promotion Sciences, who is also the author of several healthcare texts. These individuals, along with several others, have made valuable contributions during the development of this book. Mark lived 9 years in Brazil during his youth and spent a year in ia mining for gold and precious minerals. Later, he authored a report on Human Ecological Studies on the Tropics in 1975 analyzing the delicate environmental balance of ia's complex ecosystem.
