Kevin R Campbell : Women and Cardiovascular Disease: Addressing Disparities in Care before purchasing it in order to gage whether or not it would be worth my time, and all praised Women and Cardiovascular Disease: Addressing Disparities in Care:

4 of 4 people found the following review helpful. Very good book on the basics of women's cardiovascular healthBy Wendy B. HanawaltVery good book on the basics of women's cardiovascular health, but I would have preferred more detail. But if you know nothing about the subject, it's a great place to start.0 of 0 people found the following review

helpful. Dr. Kevin Campbell sheds light on the Mystery of Women's Heart Disease!!! GO RED AND BE AWARE!!!By Patricia J. HobbsI love this book, being a woman with CAD and other Heart Failure diseases. I follow Dr. Kevin religiously so I would never miss this!Best Regards!~Patricia Hobbs3 of 4 people found the following review helpful. Disappointed...By Avid Reader 51Very disappointing... I expected to be enlightened, but I found nothing that is not well known by those of us who suffer from Cardio issues. I was initially deterred by the steep price of \$11.99 for just 148 pages, but having followed this author on Fox News spots I went against my better judgment and made the purchase anyway! Keep your money and talk with your personal Cardiologist or do some computer research to learn more about a particular issue you might be experiencing.

Cardiovascular disease is the number one killer of both men and women in the Us and Europe today. Over the last 20 years, many innovations in technology have allowed for improved therapies for heart attack and stroke and overall outcomes have significantly improved. Death rates from cardiovascular disease in men are declining. However, even with these improvements in care, death rates for women remain unchanged. This book will explore these gender disparities in care in depth - specific sections will be devoted to answering the questions of why they are occurring and what healthcare providers and women can do to effect change and narrow the gender gap in cardiovascular care. Ultimately, this book is designed to open the eyes of healthcare providers, medical professionals and policy makers - as well as potential female patients - and should serve as a call to action to promote better cardiovascular care for women. Through education, awareness and advocacy women worldwide will benefit, the gap will begin to close and better cardiovascular care can be provided for all.

From the Inside FlapCardiovascular disease is the number one killer of both men and women in the US and Europe today. Over the last 20 years, many innovations in technology have allowed for improved therapies for heart attack and stroke and overall outcomes have significantly improved. Death rates from cardiovascular disease in men are declining. However, even with these improvements in care, death rates for women remain unchanged.
