I own three books by this author and use them in my home health speech pathology work with adults. The ease of use and organization appeal to me and can be adapted for many levels of reasoning if not used exactly as the instructions describe. Most of the activities are for higher cognitive functioning adults than those with moderate dementia, but I really like the reproducible/copy-able pages and would recommend for those needing cognitive activities for adults.

Outstanding resource for school-based therapists. A plethora of activities that can be used daily when working with children who have executive skill development needs. Activities can be used to assess present level of function as well as progress.
